Name of discipline	International Payment Systems
The scope of the discipline	2 credit units (72 hours.)
The summary of the discipline	
Title of the topics of the discipline	The summary of the topics of the discipline
Topic 1. Payment systems: theory and classification	General theoretical questions and terminology. Definition of payment system and its elements. Payment instruments. Document turnover. Information technology development and payment systems.
Topic 2. Importance of payment systems and regulation	Cash and non-cash payments. Advantages of non-cash money. Revenues from payment transactions. Importance and efficiency. Payment systems functions. National payment systems. Payment systems regulation. Role of Central Banks. Risks.
Topic 3. US payment system	Development of the US payment systems. Factors impacting Development of US payment systems. Payment and settlement organizations. Regulation of financial institutions. Role of the Federal Reserve.
Topic 4. US payment instruments	Interbank payment systems. Cheques settlement systems. Cards payment systems. Electronic payment systems. Price policy of payments. Wholesale payment systems.
Topic 5. EU payment systems	Eurosystem: ECB and national central banks of Eurozone. European system of national banks. Role and functions of Eurosystem. Target.
Topic 7. Russian payment system	Russian payment system. CBB payment system. Private payment systems. Payment systems regulation. Development strategy of the Russian payment system.

Topic 8. Express money transfers	Express transfers systems. Factors and importance of express payments. Geography of money transfers. Evolution of global express payments systems. Mechanism of express money transfers.
Topic 9. Travellers' cheques	Travellers's cheques payment and settlement systems. World market of travellers' cheques transactions: dynamics and structure.
Topic 10. Payment cards	Payment cards classification. History of payment cards. Technology of card payments. World payment cards market. Competition in the world card payments. Cobranding projects. Payment cards systems regulation. Trends of global payment cards systems.
Topic 11. Electronic money: challenges and opportunities	Electronic money payments. Electronic cash. Electronic money issuance. Functions and advantages of electronic money. Disadvantages and risks of electronic money.
Topic 12. Blockchain technology and cryptocurrencies	Blockchain technology. Contracts theory. Basics of cryptocurrencies functioning. Tokens. ICO. World money of cryptocurrencies. Risks and threats. Regulation.

Credit rating of commercial banks.</p> <p>Currency transactions with immediate delivery and urgent transactions with foreign currency.</p>
<p>Topic 5. International financial organizations.</p>	<p>General characteristic of the international financial institutions (IFI). History, reasons and purposes of their creation. Concept IFI and their classification.</p> <p>Status of the international financial institutions. Features of activity of IFI. IMF entering into UN system. Formation of the IFI resources: own means, loans, possibility of issue of securities. Main borrowers of IFI.</p> <p>International Monetary Fund (IMF). Organizational structure of the Ministry of Internal Affairs Capital</p>

	and loan resources of Fund. Credit activity of IMF. Special funds. IMF role in regulation of the international monetary and credit relations.
Topic 6. Balance of payments	Balance of international payments as the generalized reflection of the economic relations between the countries. Structure of the balance of payments: trade balance, balance of the current operations, balance of movement of the capitals. The main and balancing articles. Active and passive balance of payments. Account of the current operations: economic contents of the main articles. Account of operations with the capital and financial instruments. Economic contents of capital articles of balance. Basic principles of drawing up balance of payments. Information base of drawing up balance of payments.
Topic 7. World foreign exchange market.	World market of the loan capitals: structure, participants, features of transactions, development tendencies.
Topic 8. National Central Banks (NCB) in the system of international credit	Internationalization of bank activity. Participation national the Central Bank in trade operations in the international financial market and its separate segments. Operations on sale and purchase of foreign cash currency (banknotes). Credit operations between national the Central Bank types a swap. Participation of the Central Bank in activity of the international organizations. Delivery of permissions to creation of banks about participation of the foreign capital. Central Bank representations abroad. Central Bank and problem of the international liquidity

Description of the Discipline

38.04.01 "Economics"
Master Program "International business"

Discipline	Restrictions and limits of FEA
Academic program	<i>38.04.01 "Economics"</i> <i>Master Program "International business"</i>
Volume of the discipline	3 AcadUnit (108 hours)
Brief content of the Discipline	

Sections of the Discipline	Brief content of the Sections
Section 1.	<p>Topic 1. System of prohibitions and restrictions in the sphere of foreign trade in goods</p> <p>Topic 2. The legal basis for the application of prohibitions and restrictions in the foreign trade activities of the Russian Federation in the functioning of the EAEU</p> <p>Topic 3. Licensing in the field of foreign trade in goods</p> <p>Topic 4. Quotas in the sphere of foreign trade in goods</p>
Section 2.	<p>Topic 5. Features of customs control over the import and export of licensed goods</p> <p>Topic 6. Licensing procedure for the movement of certain categories of goods across the customs border of the EAEU</p> <p>Topic 7. The procedure for moving precious metals and precious stones across the customs border of the EAEU</p> <p>Topic 8. Export control system</p>

Abstract
field 38.04.01 "Economy"
Master program "International Business"

Name of the discipline	<i>Microeconomics</i>
Credit hours	3 credit units (108 hours.)
Course Description	
The title of the part of the course	Brief content of the topic:

<p>Section 1. The optimal management decisions. Alternative models of company behavior.</p>	<p><i>Topic 1.</i> The concept of enterprise model and its economic objectives in the long and short term. Transaction costs. The hypothesis of profit maximization.</p> <p><i>Topic 2.</i> Non-economic objectives of the company and the social responsibility of business. The hypothesis of maximizing shareholder wealth. Market value added and economic value added. The profitability of the company and access to the world market, international competition.</p> <p><i>Topic 3.</i> Alternative models of firm behavior: profit maximization, maximize sales, maximizing growth, behavior management, maximize value added (Japanese model). Complexity of the application of alternative models</p>
<p>Section 2. Demand and supply. The elasticity of demand. Practical aspects of pricing.</p>	<p><i>Topic 4.</i> Methods for assessing demand. Consumer balance. Marginal utility and consumer surplus. The effect of advertising and promotion. Basic methods of forecasting demand - mechanical and barometric model.</p> <p><i>Topic 5.</i> The economic concept of elasticity. Price elasticity of demand, factors of influence and methods of measurement. Arc and point elasticity, their differences and peculiarities of application in practice. Cross elasticity, substitutes and complements. Other elasticities.</p> <p><i>Topic 6.</i> The relationship of strategic management and market trends. Objectives pricing. Optimal pricing in various markets. The impact of price discrimination on social welfare. Analysis of the price cartel. Pricing for the full cost and incremental cost. Transfer prices. Other pricing practices.</p>
<p>Section 3. Theory and evaluation of production. The value of the cost in management decisions. Pricing and volume of production in the main competition models</p>	<p><i>Topic 7.</i> Production function, the distinction between short-term and long-term production function. The value of production functions in management decisions. Short-term analysis of total, average and marginal product. Optimizations of the production function and profit maximization.</p> <p><i>Topic 8.</i> Theory and nature of costs in management decisions. Types of costs: alternative and straight, sunk and other. Accounting and economic costs. The initial and replacement cost. Costs and production, common variables and marginal costs.</p>

<p>Section 4. Investment and risk management in the economy.</p>	<p><i>Topic 9.</i> Capital investment budgeting. Leverage. Evaluation of cash flow and capital appreciation. Types of management decisions on the analysis of the effectiveness of planned investment. Evaluation of the investment programs.</p> <p><i>Topic 10.</i> Information as an economic resource. Risk and uncertainty - sources and various parameters. Measuring the degree of risk, probability distribution. Methods to reduce the risk. Economic analysis of the effectiveness of investments in terms of risk.</p>

Name of discipline	Industrial policy
Discipline volume	3 test units (108 h)
Краткое содержание дисциплины	
Name of discipline sections	Summary of discipline sections:
Section 1. INDUSTRIAL POLICY AS FUNCTION of STATE REGULATION of ECONOMY	Evolution of state regulation of economy in the conditions of globalization. Ratio of the state and economic borders. Homeland security as new public benefit. Safety and development. State and new industrialization.
Section 2. FUNDAMENTALS of INDUSTRIAL POLICY	Sense and maintenance of the concept "industrial policy of Russia". Its basic provisions and options. Realization technique. Legislative base.
Section 3. CONCEPTUAL ASPECTS of INDUSTRIAL POLICY of RUSSIA	Ideology of industrial policy and specifics of its various models. Temporary and regional measurement. The factors influencing the choice of the concept. MRT tendencies. Main directions of structural adjustment of the industry of the Russian Federation.
Section 4. MODELS AND TOOLS of INDUSTRIAL POLICY	Models of industrial policy. Russian specifics. Project as tool. Types of projects. "The regional revolution". Territorial clusters. Industrial policy of "the second

	generation". Stimulation of investment activity. Credit financing. Stock exchanges. Budget of development. Taxation system. Protection of the domestic market. Export support. Import substitution. Project management. Innovative policy. RNIS – the Russian national innovative system. Industrial policy in the context of membership of Russia in the WTO.
Section 5. PROJECT of "NEW INDUSTRIALIZATION" of RUSSIA	The program of modernization of Russian Armed Forces and development of Defense industry complex till 2020. Aviation industry ("OAK"). Shipbuilding ("OSK"). Rosatom. RUSNANO. Roskosmos. Skolkovo.

Name of discipline	<i>CORPORATE GOVERNANCE</i>
The scope of the discipline	2 credit units (72 Hours.)
The summary of the discipline	
Title of the topics of the discipline	The summary of the topics of the discipline
Topic 1. Corporate governance: definition and meaning	Definition, goals and objectives of corporate governance. The history of corporate governance. Corporate management costs. The effect of corporate governance.
Topic 2. Theories and models of corporate governance	Agent theory Service theory. Stakeholder theory. Anglo-American model of corporate governance. German model of corporate governance. Japanese corporate governance model.
Topic 3. International standards of corporate governance and corporate governance in Russia	OECD Principles. Best corporate governance practices. Corporate Governance Code of the Federal Financial Markets Service.
Topic 4. Management and control bodies of joint stock companies.	Competence of organs. Tasks organs. Shareholder rights.
Topic 5. Board of Directors	Aims and objectives, powers, order of formation and termination of powers. Reward and responsibility. Restriction on election. Board Committees.

Topic 6. Executive bodies of the joint stock company	Aims and objectives, powers, order of formation and termination of powers. Reward and responsibility. Restriction on election. Transfer of authority to the managing organization.
Topic 7. Information disclosure and transparency in corporate governance.	The value of disclosure. Quarterly reporting and its content. The essential facts. Facts affecting the value of securities. Publicity Financial statements. Types of disclosure. Responsibility for violations in disclosing information
Theme 8. Integration dynamics in the corporate sector and government regulation of integration processes.	Mergers and acquisitions, concept, types. Antitrust regulation.
Topic 9 Prospects for the formation and development of the Russian model of corporate governance	The concentration of capital in the hands of management. Strong insider positions. Creating holding structures.

Name of discipline	<i>Enterprise forecasting</i>
The scope of the discipline	<i>3 credit units (108 hours.)</i>
The summary of the discipline	
<i>Topics of the Discipline</i>	<i>The summary of the topics of the discipline</i>

1. Application of peer review methods

The management in forecasting

Facts affecting the activity of the enterprise. Uncertainties and risks. The role of forecasting in the planning of the organization and management decision-making. Evolution of approaches to predicting the future. Statistical methods of forecasting and expert evaluation: the essence of the advantages, disadvantages and scope. Select the forecasting method.

Expert evaluation

The essence and main tasks of expert evaluation. Features of use and purpose of collective and individual expertise. Examination by the method of questioning and interview. The analysis of the scatter of the results of the assessment, the assessment of consistency of expert opinions, identifying the reasons for the discrepancies. The calculation of the characteristic value.

Delphi method. The method of brainstorming.

Selection of optimal solutions by the method of rank collection. A survey of experts and calculation of the coefficient of coherence.

Overcoming contradictions in expert assessments, the paradox of Condorcet.

Examination by the method of pair comparisons of Yang.

2. Forecasting based on statistics

Univariate regression models

The concept of time series, types of time series and features of forecasting. Evaluation of statistical data quality, identification of anomalous values, data consolidation and other methods of data pre-processing.

Forecasting by selection of growth curves. Types of processes and characteristic functions for their description. Function selection by the least squares method using basic Excel features. Selection of regression coefficients for arbitrary fiction.

Linear and exponential smoothing models: advantages and disadvantages. Forecasting in terms of aging, selection of the aging coefficient in the exponential smoothing model.

Autoregression models and their application. Using the ARIMA model.

"Naive models" and their use in step forecasting

Hybrid forecasting models.

To evaluate the accuracy and adequacy of predictive models

The concept of model accuracy and methods of its measurement, accuracy indicators: MSE, MAPE, R2, etc.

The concept of model adequacy. Evaluation of theistic significance of the model based on Fisher and student criteria. Statistical error analysis: analysis of the error distribution, the criterion of turning points, checking for autocorrelation. The use of ExPost forecasting for assessment of adequacy.

Calculation of confidence intervals of the forecast

	<p>for adequate models. Factors affecting the accuracy of the forecast. Definition of development scenarios.</p> <p>Overcoming contradictions in forecasts obtained by different methods.</p> <p>The prediction and description of the seasonal processes</p> <p>The concept of seasonality and cyclicity. Identification of cyclic processes based on the analysis of autocorrelation function. The detection of cycles by the method of Fourier transformation.</p> <p>Seasonal decomposition methods: additive and multiplicative seasonality. The order of formation of the seasonal process description function.</p> <p>Multivariate forecasting models</p> <p>Advantages of using multivariate predictive models. Identification of influencing factors on the basis of the correlation matrix. Typical functions of multifactor models (linear and power). Reduction of influencing factors, overcoming multicollinearity.</p> <p>Assessment of the quality of the source data.</p> <p>Selection of regression coefficients based on the module, the Excel "Regression". Checking the significance of factors by excluding them from the model.</p> <p>Calculation of multi-factor exponential model by the method of linearization data.</p> <p>Other multifactor models, methods of model selection by evolutionary programming algorithms.</p>
3. Data mining and forecasting	<p>Intelligent forecasting methods.</p> <p>The concept of intelligent data analysis methods. Data Mining algorithms: essence, principle of operation, main tasks. Artificial neural networks, Coronal and multilayer perceptrons. Examples of the solution of forecast problems.</p> <p>Disadvantages of intelligent data analysis methods.</p>

Abstract
field 38.04.01 “Economy”
Master program “International Business”

<i>Name of discipline</i>	<i>Business planning</i>
The scope of the discipline	2 credit units (72 hours.)
<i>Summary of discipline</i>	
Topics of the Discipline	The summary of the topics of the discipline
1. The essence and organization of the business planning system in enterprises	Principles and methods of planning, types and content of planning in enterprises. Strategic and operational planning. Structure and functions of planning units The main objectives of the organization and the system of key indicators of its activities. Main planning documents: business concept, strategy, functional plans, business plans, feasibility studies and others. Differences between the business plan and the feasibility study of the project, the relationship of project and functional plans of the organization. Standard regulations for the development and approval of corporate plans. The structure of the annual current plan of the enterprise. Management accounting and budgeting of the organization. The system of budget plans of the organization: functional budgets, budgets by activity, budgets for the Central Federal district. The final budget documents. Organization of "sliding" budgeting. Planning of non-financial indicators: balanced scorecard (BSC) and key performance indicators (KPI) for different types of business. The relationship between qualitative non-financial and quantitative financial results. Program and target planning (result-oriented budgeting): essence, distinctive features and scope of application. The approval of the business plans of the parent structures. Formal description of planning processes in the organization using graphical notations.
2. Basic functional plans of the organization and approaches to their formation	Plan staff: planning the structure and regular number of the personnel, performance targets, productivity, cost planning labor and training. Production plan: indicators of the production program of the enterprise, the formation of production plans, the forecast of production costs, planning using MRP and ERP class systems. Sales plan: sources of information about demand, distribution costs, coordination of the sales plan with production capabilities, formation of the plan of funds receipt. Leveraging the capabilities of sales management programs (DRP). Logistics plan: determination of material resource requirements, procurement forecast, forecast of procurement and logistics costs. Long-term development plans: R&D budget, sources of information on the cost of future work, especially the establishment of targets. Financial plan of the company: content, rules of registration, sources of

	information, targets.
3. Forecasting methods in the practice of internal planning	<p>Classification of forecasting methods. Scope and features of application of economic-mathematical and expert evaluation methods. The order of collective examination (brainstorming methods, "Delphi", rank correlation method of paired comparisons, multi-factor ranking, etc.). Features of evaluation of quality factors. Assessment of the degree of consistency of expert opinions and overcoming the problem of non-transitivity of the evaluation results.</p> <p>Use of regression predictive models in business planning. Quality assessment of primary information. Obtaining forecasts using Excel capabilities (single - and multi-factor regression, seasonal decomposition, smoothing models, ex-post forecasting, ARIMA method, etc.). Estimation of accuracy and adequacy of forecast models, calculation of confidence intervals and obtaining scenario forecasts of development.</p> <p>Specialized software and online services for forecasting, forecasting based on data mining technologies.</p>
4. Investment projects in the business planning system of the organization	<p>Comparative characteristics of the traditional and project approach in the management of the organization. Definition of the term "project". Project management goals and objectives. The relationship of project management to the competitiveness of the business. Prerequisites for the transition of enterprises to project management.</p> <p>Stages of development and the modern world of project management. Criteria for assessing the quality of project planning..</p> <p>International organizations and standards for project management (PMI, IPMA, etc.) Russian national requirements for the competence of project management specialists, standards for project management.</p> <p>The range of issues addressed in project management. The relationship of project management with the management of the organization, financial and economic planning, marketing, logistics, accounting and other disciplines. Basic project management processes and their classification. Tasks and functions of project management. Project manager. Project participant. Project team</p>
5. The order of development and methods of planning business projects..	<p>The main stages of the project planning process. Methods of project work description (WBS), types of work and features of their planning. Determination of the duration of work and their logical sequence. Description of the relationships and limitations of the work. Methods of construction of network models of the project, types of networks and their purpose. Formation of work calendars. Gantt chart (road map). Planning by CPM and PERT methods.</p> <p>Ways to reduce the project implementation time.</p>

	<p>Methods of estimating the estimated cost of future work (project-analogue method, method of parametric estimates, etc.). Resource method for determining the cost of the project. Types of resources and features of their use, resource planning, resource diagrams.</p> <p>Identification of resource overloads and their impact on the cost of the project. Resource alignment. Resolving the contradiction between reducing the cost of the project and reducing the time of its implementation.</p> <p>Managing the life cycle of products (CALS-technologies). Project management and organization planning with MS Project, Open Plan and other specialized SOFTWARE.</p>
<p>6. Evaluation of commercial efficiency of projects</p>	<p>Regulatory framework for assessing the effectiveness of investment. The essence of the CBA method (cost-benefit method, budget approach) to modeling an investment project. Types of cash flows. The choice of the planning horizon of the project and interval calculation. Analysis typical forms of project financial statements forecasts: statement of financial results, statement of cash flows, balance sheet.</p> <p>Assessment of the overall funding requirement of the project. Sources of financing of investment projects, coordination of project plans with the capabilities of the company.</p> <p>The change in the value of money over time, the need to use discounting. The essence of the discount rate and the main methods of its calculation (CCM, CAMP, WACC), accounting for project risks.</p> <p>The system of indicators of economic efficiency of investments: methods of calculation and their economic meaning (ARR, PB, DPB, NPV, PI, IRR, MIRR).</p> <p>The General procedure of calculation of the business project, the choice of better alternatives and optimization of the project on the basis of indicators of its efficiency..</p> <p>Problem integration of project plans with the General system of planning in the enterprise: the method of conditional allocation, the method of Association, the method of overlay. Consideration of synergetic effects. Forecast of private efficiency of the project and the effectiveness of the project for the entire enterprise.</p>
<p>7. Business plan development (project feasibility study)</p>	<p>Requirements for the content and design of business plans for different tasks. Typical sections of the business plan: purpose, content, key elements. The procedure for developing a business plan: the formation of technical specifications for the development, the use of "business canvas" for the collection of primary information, coordination of project plans with the functional plans of the organization.. Software for business planning, templates of business plans, the main sources of information for planning. Approval of the project plan. Making adjustments to plans. Other project</p>

	documentation. Corporate regulations for the development and evaluation of business projects.
8. Controlling system at the enterprise	<p>Controlling in the system of target management of the organization and its main elements. Goals and objectives of controlling. Types of control, their main tasks and scope of work, the system of control indicators. Plan-factor analysis. Restrictions on the use of financial control.</p> <p>Development of a balanced scorecard (BSC) and key performance indicators (KPI). Organization of monitoring of implementation of plans of the organization. Control by the method of mastered volume—the essence and scope of application. Methods for determining the volume of development, assessment of compliance with the terms and costs of the project. Forecasting of project completion dates and final cost. Identification of the causes of deviations and ways to eliminate them. Analysis of the prospects for successful completion of the project and development of measures to combat the identified risks.</p> <p>Regulation on the implementation of the project. Procedures for the management and production of operational information. Changes to the basic plan. The order of correction and development of new operational and calendar plans.</p>

Abstract
field 38.04.01 "Economy"
Master program "International Business"

<i>Name of discipline</i>	<i>Intellectual property management</i>
The scope of the discipline	3 credit units (108 hours.)
The summary of the discipline	
<i>Topics of the Discipline</i>	<i>The summary of the topics of the discipline</i>
I. Intellectual property market	The role of innovation in the modern economy, the concept and objects of intellectual property Scientific and technological progress and

development of economic relations. The main production factors and periods of social development. The concept of post-industrial society and its properties. The main reasons for the growth of interest in innovation, the relationship between the efficiency of the company and innovation activity. Features of labor activity in the information age. The place of innovation management in management. Sources of innovative opportunities, innovative potential of economic entities.

Innovation cycle. Time, cost and management aspects of the various stages of R & d. World and Russian intellectual property market.

The concept of intellectual property, intellectual capital and intangible assets. The world intellectual property organization (WIPO). The main provisions of the Stockholm Convention on intellectual property (IP). The concept of protectability of the object and the essence of exclusive rights.

Types of intellectual property on the peculiarities of registration and protection of exclusive rights: patentable objects, objects of copyright, means of individualization of market participants, non-traditional objects.

The Paris Convention and its main provisions. The concept of market and scientific and technical novelty, absolute and local novelty, inventive step, industrial applicability, originality, priority.

Russian legal framework for the protection of patent rights. The concept of invention, utility model, industrial design, patentability criteria and features of their evaluation.

The structure of the Russian patent system, the General procedure for obtaining exclusive rights.

Objectives and procedure of foreign patenting, patent cooperation Treaty (PCT) and other forms of international cooperation in the patent field. The agreement on trade-related aspects of intellectual property and its main provisions. Conventional priority, the benefit of novelty, the right of prior use.

The main types of violations of the rights of authors and patent owners, the procedure and methods of their protection.

Objects of copyright and related rights, their use in business. The main provisions of the Berne Convention on copyright. Russian legal framework for the protection of copyright and related rights.

The concept of the author's contract and its differences from the employment contract and the contract-contract. The main types of copyright violations in the industry and ways to deal with them.

Purpose, essence and features of protection of means of individualization of participants of civil turnover and their production: firm names, trademarks, service marks and places of origin of goods. Similarities and differences in the concepts of trademark, trademark and brand.

Commercial secret (know-how), its legal status, features of occurrence and ways of protection. Types of know-how.

The essence and legal status of the innovation proposal, its importance in the innovation activity of the enterprise. The order of registration of exclusive rights, the definition of criteria for compliance with the status of the development of rationalization proposals.

The right to suppress unfair competition. Acts contrary to honest industrial or commercial practice, the establishment of and procedure for defending the corporate interests.

Licensed trade in intellectual property

The current market for IP, the value of the licensed trade in economic development.

The concept of a license agreement and its differences from contracts of sale in the material sphere. Types of license agreements in legal form (voluntary, mandatory, open, compulsory) and the volume of rights granted (simple, exclusive, complete, etc.). The main criteria for selecting the license type in the purchase and sale transactions. Structure and content of the standard license agreement.

The advantages and disadvantages of the licensed trade to developers and buyers of licenses. Restrictive practices in licensing agreements.

Features of legal registration of patent and patent-free licenses

License pricing and technology transfer

General approaches to evaluation, the main pricing factors. typical approaches to evaluation.

Cost - based methods of pricing, their varieties, scope, advantages and disadvantages. Calculation of costs for the creation of the IP object and its replacement. The determination of the proportion of the cost of specific development total expenditure on research work.

Market (comparative) methods of determining prices and their varieties: a method of comparing sales, parametric estimates, industry coefficients. The concept of the standard royalty rate and methods of its determination. Select the royalty base. Adjustment of the standard rate for the conditions of a particular transaction. Lump-sum contribution and its economic meaning.

The essence of profitable methods for determining the price of a license and their varieties: the method of exemption from royalties, the method of income advantage, etc. Evaluation of the economic efficiency of the license, forecasting cash flows and their discounting. Evaluation of the license period, the cost of licensed products and the volume of its production. "25% method." Selection of the evaluation method and assessment of its priority for specific tasks. General approach to the harmonization of evaluation results by different methods

Accounting and evaluation of intellectual property

The main goals and objectives of the assessment and accounting of IP in enterprises. International and domestic IP accounting and evaluation standards: IP Classification for accounting and evaluation purposes.

Russian legal basis of valuation: law on valuation

activities, standards of the Russian society of appraisers in the field of IA, Guidelines for determining the market value of IP, etc.

Types of IP value and the basic principles of valuation, the concept of market, consumer and accounting value.

General procedure for the evaluation of IP objects.

Accounting of intangible assets, the main objectives of accounting for intangible assets on the balance sheet. The main provisions of the IFRS Russian legal framework of accounting IA: types of assets, the criteria for the balance sheet, the card of accounting in the form of HMA-1, display of IA in the financial statements. Depreciation and the taxation of intangible assets.

The complexity of accounting for certain types of IA, the contradictions of domestic legislation and international standards.

The relationship between intangible assets and the market value of the company. Principles of valuation of intellectual capital, classification of intangible assets to assess their market value. General procedure for studying the impact of intangible assets on the market capitalization of the company.

Contradictions between the principles of classical accounting and market aspects of knowledge. Basic approaches to management accounting of IP.

Features of accounting for certain types of IA: know-how, R&D results, databases, business reputation (goodwill), ownership, use, etc.

Management accounting of IP and forms of presentation of information on intangible assets.

Assessment of the total market value of the company and the allocation of the value of intangible assets. The differences of the concepts of goodwill (goodwill), reputation and brand. The cost of acquired goodwill, depreciation of goodwill, revaluation. Components of goodwill (technological, artistic, client and marketing assets) and their accounting under modern IFRS.

Methods of assessing the value of trademarks in the framework of cost, market and income approaches. Features of evaluation of trademarks for the purpose of sale. The essence and economic meaning of franchising. Typical payment schemes of franchise operations, calculation and justification of payments. Legalization and the economic rationale of franchising transactions.

Contracts as a type of intangible assets of the enterprise and evaluation of their market value. Information assets (IT assets) their varieties and distinctive features. Methods for determining the market value of databases, libraries, archives and other information assets

Assessment of damage in case of violation of exclusive rights/

The main types of copyright and patent infringement. Rights of authors and patent owners to property compensation. Types of damages for violation of exclusive rights. General procedure for defending the

	<p>rights of authors and patent owners. The right to property compensation. Examination of the amount of damage.</p> <p>Methods definition of illegal income of the violator from production of counterfeit production and application of the patented method. Justification of the size of the lost profit of the victim for various cases of violations. Actual and theoretical damage.</p> <p>The final choice of the method and amount of compensation.</p>
<p>II. Innovation process management</p>	<p>Forecasting the cost of innovation</p> <p>Economic effect of R & d results and ways of its obtaining.</p> <p>The concept of the market price of IP and marginal prices. The economic essence of the upper and lower prices (the price of the consumer and the seller). The pricing principles of the object being created is.</p> <p>Objects created within R & d projects. The structure of the R & d cycle to solve the problem of pricing of newly created IP objects. Methods for determining the upper limit of the cost of creating an object of research: alternative, integral, extremely efficient and analog methods of their scope, advantages and disadvantages. Methods for determining the lower limit of the cost of creating an object of research: analog method and the method of unit costs. Methods of forecasting the cost of OCD. Methods for determining the upper limit of the production cost of R & D: dynamic, regression, analog, compensation. Methods for determining the lower limit of the manufacturing cost of the R & d object.</p> <p>Changing the cost of production in the transition from the production of pilot batches to the mastered production. The relationship between the cost of the sample and the planned output. Approaches to coordination of forecast estimates obtained by different methods</p> <p>R&D project management</p> <p>The concept of product and project life cycle. R&d and R & D. General procedure of project development, project documentation. Organization of works on project implementation: functional and mathematical management structures. Project management as one of the management technologies. Methods of evaluating the effectiveness of research, development and implementation. The essence and methods of determining the levels of technological and industrial readiness of the technology for use, complex indicators of readiness. Comparison of domestic and foreign experience in R & D projects</p> <p>National innovation system. Data analysis and information retrieval tools</p> <p>Methods of evaluation of prospects and reliability of scientific results. Examination of proposals and expert evaluation methods.</p> <p>Selection of a sample (technology, enterprise) analog. Similarity criteria, the use of cluster analysis to justify the choice of analogue.</p> <p>Evaluation of the complex indicator of sample quality, ranking of samples. Sampling and comparison</p>

	<p>criteria. Algorithms for calculating the complex quality index (swing method). Concept and main objectives of patent and information search, types of search. Systems of classification of scientific and technical information: international system of classification of inventions, useful motifs and trademarks; state rubricator of scientific and technical information, library classification, etc. The main Russian and foreign printed sources of scientific and technical information. Information sources on the Internet. Features of work with databases of Rospatent and national patent offices of foreign countries, WIPO database.</p> <p>Search for non-patented scientific and technical information. Contents of databases of the main Russian information centers.</p> <p>The main international information retrieval systems (Questel-Orbit, STN International, Derwent, etc.) their purpose and features. General procedure of patent and information search organization, definition of search tasks and key issues.</p>
