**Federal State Autonomous Educational Institution of Higher Education
Peoples' Friendship University of Russia named after Patrice Lumumba
RUDN University
Academy of Engineering**

educational division (faculty/institute/academy) as higher education programme developer

INTERNSHIP SYLLABUS

«Technological practice (training) / Технологическая практика (учебная)

internship title

Educational

internship type

Recommended by the Didactic Council for the Education Field of:

21.04.01 Oil and gas engineering

field of studies / speciality code and title

The student's internship is implemented within the professional education programme of higher education:

Oil and gas engineering / Технологии добычи и транспортировки нефти и газа

higher education programme profile/specialisation title

1. INTERNSHIP GOAL(s)

The goal of the Internship «Technological practice (training) / Технологическая практика (учебная)» is the consolidation of theoretical knowledge gained in the learning process, the acquisition of practical skills and the formation of professional competencies at the operational and tactical level of development of knowledge, skills and abilities of future specialists.

The main objectives of the «Technological practice (training) / Технологическая практика (учебная)» are:

- consolidation and development of theoretical knowledge gained in the study of basic disciplines;
- development and accumulation of special skills, study and participation in the development of organizational, methodological and regulatory documents for the implementation of research work;
- familiarization with the content of the main work and research carried out in the scientific team at the place of internship;
- taking part in the implementation of specific research work;
- conducting applied scientific research on the problems of the oil and gas industry, assessing the possible use of the achievements of scientific and technological progress in oil and gas production;
- development and justification of technical, technological, technical-economic, socio-psychological and other necessary indicators characterizing technological processes, objects, systems, projects, oil and gas organizations;
- development of physical, mathematical and computer models of the studied processes, phenomena and objects related to the professional field;
- improvement and development of methods for analyzing information on technological processes in the pipeline transport of hydrocarbons;
- creation of new and improvement of modeling and calculation methods necessary for the design of technological processes and technical devices in the industry;
- improvement and development of new methods for experimental studies of the physical processes of oil and gas production and technical devices;
- implementation of the collection, processing, analysis and systematization of scientific and technical information on the topic of research, the choice of methods and means for solving the problem;
- implementation of the preparation of scientific and technical reports, reviews, publications based on the results of research;
- development of models of design solutions for quality management in oil and gas production;
- development of systems for ensuring industrial and environmental safety of facilities, equipment and technologies for oil and gas production.
- direct participation in the work process of the scientific team with the performance of the duties of the researcher;
- collection of materials for the preparation and writing of a master's thesis.

2. REQUIREMENTS FOR LEARNING OUTCOMES

The internship «Technological practice (production) / Технологическая практика (производственная)» is aimed at the formation of the following competencies (parts of competencies) of students:

Table 2.1. List of competencies formed by students during the practice (learning outcomes based on the results of the practice)

Cipher	Competence	Competence achievement indicators (within this discipline)
GPC-1	Able to solve production and/or research tasks based on fundamental knowledge in the oil and gas field.	<p>GPC-1.1. Knows the methods and technologies (including the innovative ones) of development in the field of oil and gas engineering, scientific and methodological support of professional activity, principles of professional ethics.</p> <p>GPC-1.2. Can carry out research activities for the development and implementation of innovative technologies in the field of oil and gas engineering; develop programs for monitoring and evaluating the results of the implementation of professional activities; develop information and methodological materials in the field of professional activity; use the fundamental knowledge of professional activity to overcome specific challenges of oil and gas production.</p> <p>GPC-1.3. Has the skills of physical and software modeling of separate fragments of the process of choosing the best option for specific conditions; skills in analyzing the causes for the quality reduction of technological processes and suggests effective methods to improve the quality of work in various technological operations; the skills in the use of modern tools and methods for planning and controlling projects related to the complications arising in the course of work.</p>
GPC-2	Able to design oil and gas production facilities	<p>GPC-2.1. Knows the normative legal documents regulating the requirements for professional activity; algorithm for organizing work in the process of designing oil and gas production facilities; aspects of working in contact with the supervisor.</p> <p>GPC-2.2. Can apply the methods and technology of designing the main and additional processes of oil and gas production; formulate goals for the performance of work and propose ways to achieve them; own the methodology and technology for designing oil and gas production facilities; apply an activity approach to design problems in the field of oil and gas production; evaluate the convergence of the results of calculations obtained by various methods.</p> <p>GPC-2.3. Has the principles and techniques of designing oil and gas production facilities; methods for developing a scientific and methodological approach to the design of oil and gas production processes; has the skills to promptly fulfill the requirements of the working project; the skills to work in modern PCs, using new methods and software packages.</p>
GPC-3	Able to develop scientific and technical, design and service documentation, draw up scientific and technical reports, surveys, publications, reviews	<p>GPC-3.1. Knows methods for evaluating the types of entrepreneurial activities used in the enterprise.</p> <p>GPC-3.2. Can use the basics of logistics, in relation to an oil and gas enterprise, when the main technological operations are performed in conditions of uncertainty; put into practice the elements of production management; use the opportunities for entrepreneurial activities at the entrusted facility and its legislative regulation; find the possibility of combining the performance of basic duties with elements of entrepreneurship.</p> <p>GPC-3.3. Has the skills of personnel management in a small production unit.</p>

Cipher	Competence	Competence achievement indicators (within this discipline)
SPC-4	Able to manage the system for monitoring the technical condition and technical diagnostics at the facilities and plants of the oil and gas complex	<p>SPC-4.1 Knows the principles, physical foundations, technical support of technical control and diagnostic methods, modern developments in the field of strength of materials, fracture mechanics, materials technology and materials science; design features, manufacturing technology, operation and repair of the control object, types and types of defects, probable zones of their formation, taking into account the loads acting on the object and other factors, principles, physical foundations, technical support for the types and methods of technical control and diagnostics; principles of construction, functional diagrams and rules for operating equipment for a given method of control, rules for selecting and checking the quality of used consumable flaw detection materials; control systems used to check objects (products) of a certain type; metrological support; standards, calculation methods and other applicable regulatory documents and rules for assessing the technical condition; harmful environmental factors of this control method and ways to prevent their impact on the environment and humans; principles of planning and organization of work of technical control and diagnostic units, current state and prospects for the development of technical control and diagnostic methods; rules for electrical safety and fire safety, rules for the construction and safe operation of facilities</p> <p>SPC-4.2 Can determine the methods, equipment, technologies and techniques to be used for specific types of objects; perform control operations, evaluate and identify the results of control and testing, issue conclusions on the results of technical control and diagnostics, organize, conduct and manage calculations and experimental work to assess the technical condition</p> <p>SPC-4.3 Has the skills to perform verification calculations, taking into account the identified defects; assessment of the mutual influence of various defects on the technical condition of the control object; determining the need for additional research in order to clarify the determining parameters of the technical condition; development of measures to reduce operational risks based on risk analysis, minimization of operational risks</p>
SPC-5	Able to draw up technical documentation for the implementation of the technological process (work schedules, instructions, plans, estimates, requests for materials, equipment, etc.), make an economic assessment of oil and gas fields in accordance with approved forms	<p>SPC-5.1 Knows the requirements and GOSTs for the preparation of technical documentation, basic methods of geological and industrial assessment of oil and gas fields; methods of geological-industrial and geological-economic assessment (GEO) of new geological exploration projects, taking into account all the uncertainties and risks of their implementation</p> <p>SPC-5.2 Can draw up and draw up technical documentation for the implementation of technological processes in the field of oil and gas field development, transportation and processing of oil and oil products; apply new methods of geological and industrial evaluation of oil and gas fields; determine the geological resources and the probability of finding a deposit, its production potential; carry out planning and evaluation of infrastructure solutions; determination of costs for the discovery and development of a field</p> <p>SPC-5.3 Has the methodology for preparing primary reporting, including work schedules, instructions, plans, estimates, applications for materials, equipment according to approved forms</p>

Cipher	Competence	Competence achievement indicators (within this discipline)
SPC-6	Able to apply the basic principles of rational use of natural resources and environmental protection	<p>SPC-6.1 Knows the legal and methodological framework of the procedure for conducting environmental impact assessment EIA and environmental expert activities for use in professional activities; fundamentals of the theory and normative legal acts of the integrated development and rational use of natural resources and environmental protection; the procedure for conducting a geological examination of projects, regulatory documents for compiling an environmental passport</p> <p>SPC-6.2 Can assess the state of the environment when conducting complex geological and geographical studies; use mechanisms for the rational use of natural resources and environmental protection; apply regulatory and methodological documents to assess and prevent environmental damage at production facilities</p> <p>SPC-6.3 Has the methodology of rational use of natural resources and environmental protection; a system of methods (EIA) and conducting state environmental expertise for successful research and production activities; skills and knowledge to assess environmental damage at production facilities, modern methods for eliminating the consequences and preventing environmental damage at production facilities</p>

3. INTERNSHIP IN HIGHER EDUCATION PROGRAMME STRUCTURE

The internship « Technological practice (training) / Технологическая практика (учебная)» refers to compulsory (disciplines) part of module of block 2 of the curriculum.

As part of the HEP HE, students also master disciplines and / or other practices that contribute to the achievement of planned learning outcomes of the practice « Technological practice (training) / Технологическая практика (учебная)».

Table 3.1. The list of the HEP HE's components that contribute to the achievement of the planned learning outcomes of the practice

Code	Name of competence	Previous disciplines/modules, practices*	Subsequent disciplines/modules, practices*
GPC-1	Able to solve production and/or research problems based on fundamental knowledge in the oil and gas field.	<p>Modern aspects of geological and geophysical research in the oil and gas industry / Современные аспекты геолого-промышленных и геофизических исследований в нефтегазовом деле</p> <p>Modern stream in oil and gas processing in Russia / Современные направления нефтегазопереработки в России</p> <p>Current development of the production of unconventional hydrocarbon resources in the world / Современное развитие добычи нетрадиционных ресурсов углеводородов в мире</p> <p>Technological practice (training) / Технологическая практика (учебная)</p>	<p>Research work (obtaining primary skills in research work) / Научно-исследовательская работа (получение первичных навыков научно-исследовательской работы)</p> <p>SFC</p>
GPC-2	Able to design oil and gas production facilities	Machinery and equipment for field development and transportation of hydrocarbons / Машины и оборудование	SFC

Code	Name of competence	Previous disciplines/modules, practices*	Subsequent disciplines/modules, practices*
		для разработки месторождений и транспорта углеводородов Technological practice (training) / Технологическая практика (учебная)	
GPS-3	Able to develop scientific and technical, design and service documentation, draw up scientific and technical reports, surveys, publications, reviews	Technological processes of pipeline transport / Технологические процессы трубопроводного транспорта Technological practice (training) / Технологическая практика (учебная)	Research work (obtaining primary skills in research work) / Научно-исследовательская работа (получение первичных навыков научно-исследовательской работы) SFC
SPC-4	Able to manage the system for monitoring the technical condition and technical diagnostics at the facilities and plants of the oil and gas complex	Machinery and equipment for field development and transportation of hydrocarbons / Машины и оборудование для разработки месторождений и транспорта углеводородов Technological practice (training) / Технологическая практика (учебная)	Pre-graduate practice / Преддипломная практика SFC
SPC-5	Able to draw up technical documentation for the implementation of the technological process (work schedules, instructions, plans, estimates, requests for materials, equipment, etc.), make an economic assessment of oil and gas fields in accordance with approved forms	Modern aspects of geological and geophysical research in the oil and gas industry / Современные аспекты геолого-промысловых и геофизических исследований в нефтегазовом деле Modern stream in oil and gas processing in Russia / Современные направления нефтегазопереработки в России Technological practice (training) / Технологическая практика (учебная)	Pre-graduate practice / Преддипломная практика SFC
SPC-6	Able to apply the basic principles of rational use of natural resources and environmental protection	Modern aspects of geological and geophysical research in the oil and gas industry / Современные аспекты геолого-промысловых и геофизических исследований в нефтегазовом деле Machinery and equipment for field development and transportation of hydrocarbons / Машины и оборудование для разработки месторождений и транспорта углеводородов Modern stream in oil and gas processing in Russia / Современные направления нефтегазопереработки в России Technological practice (training) / Технологическая практика (учебная)	Resource estimation, computation and recalculation of hydrocarbon reserves / Оценка ресурсов, подсчет и пересчет запасов углеводородов Pre-graduate practice / Преддипломная практика SFC

* - to be filled in accordance with the matrix of competencies and CMS НЕР HE

4. SCOPE OF PRACTICE

General workload for practice «Technological practice (training) / Технологическая практика (учебная)» is 3 credit units (108 academic hours).

5. CONTENT OF PRACTICE

Table 5.1. Content of practice *

Name of practice section	Contents of the section (topics, types of practical activities)	intensity, acc.hrs.
Section 1. Organizational and preparatory	Assignment of an individual task from the supervisor	2
	Workplace safety instruction (in the laboratory and/or production site)	4
Section 2. Main	Fulfillment of professional duties in accordance with the job description	44
	Development of the concept, formulation of problems and formulation of hypotheses, formulation of the main theoretical provisions for the practical part of the work	30
	Current control of the practice by the supervisor	5
	Keeping practice journal	5
Preparation of practice report		9
Preparation for defense and defense of the practice report		9
TOTAL:		108

* - the content of practice by sections and types of practical training is FULLY reflected in the student's practice report.

6. MATERIAL AND TECHNICAL SUPPORT FOR PRACTICE

Bld. 5, 8, Podolskoye Highway Classroom: room No. 360	A set of specialized furniture; chalk board; technical means: projection screen; multimedia projector SANYO plc xt20; system block DEPO Neos 220
Bld. 5, 8, Podolskoye Highway Mining Machinery Laboratory No. 358	Computer with pre-installed licensed software "ARMARIS" Intel Core i5 processor; "Wellhead equipment" - mock-up bench; 32" LED TV 3D on a rack; Layout - controller "Electron-09 1" from SU "Electron 05-250 » in compact design
Bld. 5, 8, Podolskoye Highway Laboratory of rational subsoil use No. 337	A set of specialized furniture; hardware: Acer V193L monitor, RAMEC STORM W system unit, keyboard, computer mouse-4; Plotter Hewlett Packard C7770B; Creative WebCam Live Motion 1 Camera, NIKON LV100D Microscope, AdventurerProRV214 Electronic Laboratory Balance, AdventurerProRV313 Electronic Laboratory Balance, Scimitar1000FT-IR IR Fourier Spectrometer, energy dispersive X-Ray fluorescence analyzer "PRISMA-ECO", High pressure reactor K201-512
Bld. 5, 8, Podolskoye Highway Mining machine laboratory No. 362	A set of specialized furniture; Drilling simulator "Transas SHELF 6000 Drill"; Additional trainee seat for the drilling simulator "Transas SHELF 6000 Drill"
Bld. 5, 8, Podolskoye Highway Laboratory of hydrodynamic processes of oil and gas production No. 341	Ejector; Bench desktop, Instrumentation and shut-off and control valves; Tank; Pump-ejector system bench, left view; laser diode; Column with liquid; Air compressor; Gas supply system to the column; Gas meter; pressure gauge; Photodiode; Digital oscilloscope

7. PRACTICE METHOD

The practice « Technological practice (training) / Технологическая практика (учебная)» can be carried out both in the structural divisions of RUDN University or in the organizations of Moscow (inside practice), and at bases located outside of Moscow (outside practice).

The practice on the basis of an external organization (outside RUDN University) is carried out on the basis of an appropriate agreement, which specifies the terms, place and conditions for conducting an internship in the host organization.

The timing of the practice corresponds to the period specified in the academic schedule of the HEP HE. The timing of the internship can be adjusted upon agreement with the Department of Educational Policy and the Department for the organization of practices and student employment at RUDN University.

8. EDUCATIONAL AND METHODOLOGICAL AND INFORMATION SUPPORT FOR PRACTICE

Main literature:

1. Alekseenkov, S.O. Fuel and energy complex of Russia. Problems and trends in the development of the market / S.O. Alekseenkov; ed. G.M. Kaziakhmedov . - Moscow: UNITY-DANA: Law and Law, 2016. - 103 p.

 - abstract database SCOPUS [http:// www .elsevier.com/ locate / scopus /](http://www.elsevier.com/locate/scopus)

Educational and methodological materials for the practice, filling out a journal and preparing a practice report:*

- 1) Rules for safe working conditions and fire safety during the practice «Technological practice (production) / Технологическая практика (производственная)» (initial briefing).
- 2) The general arrangement and principle of operation of technological production equipment used by students during their practice; flow charts and regulations, etc.
- 3) Guidelines for filling in a journal by students and preparing a practice report.

* - all educational and methodological materials for practice are posted in accordance with the current procedure on the page of practice in TUIS

9. EVALUATION MATERIALS AND SCORE-RATING SYSTEM FOR ASSESSING THE LEVEL OF FORMATION OF COMPETENCES ON THE RESULTS OF PRACTICE

Marking criteria (MC) and a 100-point (score) scale (PSS)* for assessing the level of competency (part of competencies) formation based on the results of practice «Technological practice (production) / Технологическая практика (производственная)» are presented in the Appendix to this Practice Program (module).

* - MC and PSS are formed on the basis of the requirements of the relevant local normative act of the Peoples' Friendship University of Russia.
