educational division (faculty/institute/academy) as higher education programme developer

### **COURSE SYLLABUS**

Production Management and Control

(name of the discipline/module)

### **Recommended by the Didactic Council for the Education Field of:**

38.04.02 Management

(field of studies / speciality code and title)

The course instruction is implemented within the professional education programme of higher education:

Engineering Management

higher education programme profile/specialisation title

### 1. COURSE GOAL(s)

### Possible wording

The goal of mastering the *Production Management and Control* discipline to build in students theoretical knowledge and practical skills in the area of managerial decision-making regarding the production activities of the enterprise and necessary for successful work in the complex modern environment.

## 2. REQUIREMENTS FOR LEARNING OUTCOMES

### Possible wording

The mastering of the *Production Management and Control* discipline envisages building the following competencies (parts of competencies) in students:

Table 2.1. List of competences that students acquire through the course studyCompetenceCompetence DescriptorCompetence Formation Indicators

Competence Code	<b>Competence Descriptor</b>	Competence Formation Indicators (within this discipline)	
GC-3	Ability to perform critical analysis of problematic situations based on the systemic approach and develop a plan of action.	<ul> <li>GC-3.1. Know:</li> <li>economic and mathematical models of the modern market economy;</li> <li>methods of analysis, synthesis and generalization;</li> <li>GC-3.2. Be able to:</li> <li>gather and systematize the necessary economic information efficiently;</li> <li>analyze economic phenomena and processes in their correlation;</li> <li>to make logical thoughts necessary for effective management decision-making;</li> <li>GC-3.3. Master:</li> <li>modern methods of economic analysis;</li> <li>computer technologies for data collection, systematization and processing;</li> <li>the ability of self-knowledge, self-actualization, self-reflection;</li> </ul>	
GC-7	Capability to use digital technologies and methods of searching, processing, analyzing, storing and presenting information (in the professional field) in the context of digital economy and modern corporate information culture	<ul> <li>GC-7.1. Searches the necessary sources of information and data, perceives, analyzes, consolidates and transfers information using digital tools, as well as using algorithms when working with data obtained from various sources in order to use efficiently the information received for problem solving;</li> <li>GC-7.2. Assesses information, its reliability, makes logical thoughts based on incoming information and data;</li> <li>GC-7.3. Follows and promotes the norms of a healthy lifestyle in various life situations and in professional work.</li> </ul>	
GPC-3	Capability to make reasonable organizational and managerial decisions independently, evaluate their operational and organizational efficiency, and social significance, ensure their implementation in terms of a complex	GPC-3.1 Masters the methods of making the best possible management decisions in a dynamic business environment GPC-3.2 Makes reasonable organizational and managerial decisions GPC-3.3 Evaluates the operational and organizational efficiency and social significance of organizational and managerial decisions	

Competence Code	Competence Descriptor	<b>Competence Formation Indicators</b> (within this discipline)
	(cross-cultural) and dynamic environment.	GPC-3.4 Ensures the implementation of organizational and managerial decisions in a complex (cross-cultural) and dynamic environment
PC-3	Ability to manage organizations, departments, groups (teams) of employees, projects and networks	PC-3.1 Applies various organization management techniques existing in Russia and abroad PC-3.2 Applies generally accepted standards for effective interaction within the organization

### **3.COURSE IN HIGHER EDUCATION PROGRAMME STRUCTURE**

The *Production Management and Control* discipline is an elective block formed by students. Within the higher education program students also take other disciplines and / or internships that contribute to the achievement of the expected learning outcomes as results of mastering the *Production Management and Control* discipline.

Table 3.1. The list of the higher education programme components/disciplines that contribute to the achievement of the expected learning outcomes as the course study results

	Competence code Competence		Subsequent
Competence code	descriptor	courses/modules*	courses/modules*
GC-3	Ability to perform critical analysis of problematic situations based on the systemic approach and develop a plan of action.	Managerial Economics Methodology of Management Problems Research	Accounting in Engineering Management Master's Degree R&D Pre-graduation Practice
GC-7	Capability to use digital technologies and methods of searching, processing, analyzing, storing and presenting information (in the professional field) in the context of digital economy and modern corporate information culture	Managerial Economics Management Organization Theory	Master's Degree R&D Pre-graduation Practice Preparing for defense and defense of the degree thesis
GPC-3.	Capability to make reasonable organizational and managerial decisions independently, evaluate their operational and organizational efficiency, and social significance, ensure their implementation in terms of a complex (cross-cultural) and dynamic environment. 	R&D. Evaluation of the scientific and technological level of a new product. Design preparation of production. Network planning and management. The essence of the technology concept. The level of technology. Technological preparation of production. Economic basis of the drafting technological process Corporate information systems. Methodology of CIS. Integrated automated production management systems. Other modern approaches to planning. General principles of building a "just in time" system. "Push" and "pull" production management systems. Just-in-time system efficiency factors. The Kanban information system. Comparison of the MRP II concept and the just-in-time management system. Profit and profitability. The production cost assessment. Economic production efficiency:

## 6. CLASSROOM EQUIPMENT AND TECHNOLOGY SUPPORT REQUIREMENTS

Type of academic activities	Classroom equipment	Specialised educational / laboratory equipment, software, and materials for course study (if necessary)
Lecture	A lecture hall for lecture-type classes, equipped with a set of specialised furniture; board (screen) and technical means of multimedia presentations.	no
Lab work	A classroom for laboratory work, individual consultations, current and mid-term assessment; equipped with a set of specialised furniture and machinery.	no
Seminar	A classroom for conducting seminars, group and individual consultations, current and mid- term assessment; equipped with a set of specialised furniture and technical means for multimedia presentations.	no

Table 6.1. Classroom equipment and technology support requirements

Type of academic activities	Classroom equipment	Specialised educational / laboratory equipment, software, and materials for course study (if necessary)
Computer Lab	A classroom for conducting classes, group and individual consultations, current and mid-term assessment, equipped with personal computers (in the amount ofpcs), a board (screen) and technical means of multimedia presentations.	no
Self-studies	A classroom for independent work of students (can be used for seminars and consultations), equipped with a set of specialised furniture and computers with access to the electronic information and educational environment.	419

\* - the room for autonomous work of students MUST BE indicated!

Electronic educational materials used in the teaching process, multimedia presentations, a bank of test tasks, etc. are provided on the Web-local portal.

The following equipment is used for conducting classes:

- classroom whiteboard 1 pc.;
- multimedia projector 1 pc.;
- screen -1 pc.;
- personal computers (laptops, tablets) for practical training.

## 8. ASSESSMENT TOOLKIT AND GRADING SYSTEM\* FOR EVALUATION OF STUDENTS' COMPETENCES LEVEL UPON COURSE COMPLETION

The assessment toolkit and the grading system\* to evaluate the competences formation level (competences in part) upon the course study completion are specified in the Appendix to the course syllabus.

\* The assessment toolkit and the grading system are formed on the basis of the requirements of the relevant local normative act of RUDN University (regulations / order).

	95-100	Excellent A
	86-94	Excellent B
	69-85	Good C
	61-68	Satisfactory D
	51-60	Satisfactory E
	31-50	Conditionally unsatisfactory FX
	0-30	Unsatisfactory F
T	NEVEL ODEDS.

### Methodological guidelines for students on mastering the discipline (module)

The implementation of the course provides interactive lectures, practical classes (colloquiums) using multimedia equipment, preparation of autonomous creative projects and their subsequent presentations, testing, group discussions on the subject of the course, modern knowledge control technologies.

While studying the discipline, the student must attend a course of lectures, participate in the number of colloquiums provided by the course syllabus, study autonomously some topics of the course and confirm their knowledge during control activities.

The student's work in lectures consists in clarifying the basics of the discipline, briefly taking notes of the material, and clarifying issues that cause difficulties. The lecture notes are the basic educational material along with the textbooks recommended in the main list of readings.

The teaching of the main part of the lecture material involves usage of multimedia tools that facilitate the comprehension and consolidation of the material. Presentations are available for download from the RUDN website and can be freely used by students for educational purposes.

The student must master all the topics provided for by the educational and thematic plan of the discipline. Individual topics and training issues must be mastered autonomously. The student studies the recommended literature, briefly outlines the material, and clarifies the most difficult questions that require clarification during consultations. The same should be done with sections of the course that were skipped due to various circumstances.

For an in-depth study of the issue, the student should study the literature from the additional readings list and specialized websites. It is also recommended that students communicate in professional community forums.

Students study educational, scientific literature and periodicals on an autonomous basis. They have the opportunity to discuss what they have read with the teachers of the discipline during scheduled consultations, with other students at colloquiums, as well as at lectures, asking the professor questions.

The control of autonomous work is carried out by the professor in charge. Depending on the teaching methodology, the following forms of continuous assessment can be used: a short oral or written survey before the start of classes, tests, control papers, written homework, essays, etc.

### Discipline Production Management and Control

(name of the discipline)

## Self-examination and certification tests

## 1. Which of the below listed scientists was engaged in innovation?

- 1. Drucker
- 2. Schumpeter
- 3. Kondratieff
- 4. All of them

## 2. What kind of factors do hinder the innovation process?

- 1. Decentralization, autonomy, formation of target problem groups
- 2. Normal psychological climate in the workforce
- 3. Lack of funds to finance innovative projects
- 4. All of the above

## 3. Which of the above prerequisites for innovation are internal?

- 1. Potential demand growth
- 2. Product quality decrease
- 3. Staff turnover growth
- 4. Social environment

# 4. What are the differences between an innovation project and an investment project?

- 1. Higher degree of uncertainty
- 2. Higher probability of gaining a profit
- 3. Availability of scientific and technical developments
- 4. Lower degree of uncertainty

## 5. The qualitative criteria of the innovative project selection include

- 1. Financial criteria
- 2. Scientific and technical criteria
- 3. Assessment of market prospects
- 4. All of the above

# 6. The most important areas of project management decision-making process include

- 1. Project selection for their implementation
- 2. Project selection based on innovation efficiency criteria
- 3. Project portfolio formation

## 4. All of the above

This Program has been developed in line with the requirements of the RUDN University Educational Standards.
