COURSE SYLLABUS

Carbon Credits Markets

Recommended by the Didactic Council for the Education Field of:

05.04.06 "Ecology and Nature Management"

The course instruction is implemented within the professional education programme of higher education:

Climate Projects Management

1. COURSE GOAL(s)

The course is designed to help students to obtain the complex theoretical and applied knowledge in carbon credits selling and trading using international methodological approaches and standards, acquiring skills in the field carbon capture and storage, as well as studying the conditions and possibilities for global and regional carbon markets functioning.

• 2. REQUIREMENTS FOR LEARNING OUTCOMES

The process of studying the discipline is aimed at the formation of the following competencies:

Competence code	Competence descriptor	Competence formation indicators
GC-2	Able to manage a project at all of its life cycle stages	GC-2.1 can formulate a project task based on the problem posed and a way to solve it
		GC-2.2 can develop the project concept, formulate its goal and objectives, argue the relevance, expected outcomes and scope of their application
		GC-2.3 can develop a project roadmap taking into account possible risks and necessary resources
PC-2	Able to develop and economically argue plans for the new environmental equipment and technology's introduction to achieve enterprise carbon neutrality	PC-2.1 knows the environmental forecasting basics when introducing new environmental equipment and technologies into an enterprise
PC-3	Able to develop measures for the economic regulation of the enterprise's environmental performance, as part of the transition to a low-carbon economy	 PC-3.1 knows approaches to formulate and economically argue the management decisions on mitigation and adaptation to climate change PC-3.2 able to determine the economic efficiency of climate projects PC-3.2 owns the skills to prepare documentation for trading the carbon units

3. COURSE IN HIGHER EDUCATION PROGRAMME STRUCTURE

Course *Carbon Credits Markets* refers to the University Disciplines Module block 1 of the curriculum.

Within the higher education programme students also master other disciplines (modules) and / or internships that contribute to the achievement of the expected learning outcomes as results of the course.

Table 3.1

The list of the higher education programme components that contribute to the achievement of the expected learning outcomes

Competence code	Competence descriptor	Previous courses/modules, internships*	Subsequent courses/modules, internships*
GC-2	Able to manage a project at all of its life cycle stages	No	No

PC-2	Able to develop and economically argue plans for the new environmental equipment and technology's introduction to achieve enterprise carbon neutrality	Environmental Engineering and Climate Change	
PC-3	Able to develop measures for the economic regulation of the enterprise's environmental performance, as part of the transition to a low-carbon economy	No	Low-carbon Economy Ecosystem Services for Climate Change Mitigation

4. COURSE WORKLOAD AND ACADEMIC ACTIVITIES

The total workload of the course is **4** credit units.

Table 4.1. Types of academic activities during the period of the HE program(me) mastering

Types of academic activities	U 1	Total hours	Semester(s)						
Types of academic activities		Total nours	1	2	3	4			
Contact academic hours									
Lectures	17			17					
Lab works									
Seminars (workshops/tutorials)		17			17				
Self-study		83			83				
Evaluation and assessment (exam; pass/fail gro	27			27

QUESTION CARD No 1

QUESTION 1. Carbon Units Calculation: Methodological basics. QUESTION 2. Clean Development Mechanism Standards. 3 *

Developer____(Popkova Anna)

Head of Educational Department____(Savenkova Elena)

day, month, year

Note * Practice case/task inclusion is subject to the teacher's discretion.

The set of exam question cards is complemented by the assessment criteria developed by the teacher and approved at the department meeting.

Assessment criteria: (*in compliance with the legal regulations in force*)

EXAM QUESTIONS

- 1. Monitoring Plan development for GHG projects.
- 2. Baseline establishment for GHG projects.
- 3. Validation and verification of GHG projects.
- 4. Global trends in carbon markets development.
- 5.Carbon Capture and Storage.
- 6. Carbon Units Calculation: Methodological basics.
- 7. Clean Development Mechanism Standards.
- 8. Golden Standard.
- 9. Carbon Verified Standard.
- 10. Mandatory carbon markets.
- 11. Voluntary carbon markets.
- 12. Life Cycle of Carbon Projects.
- 13. LCA for the carbon footprint calculation.
- 14. Carbon credits and offsets.
- 15. Carbon projects types.
- 16. Technical feasibility of carbon projects.
- 17. Financial feasibility of carbon projects.
- 18. Credits sales. Direct sales. Brokered sales. Exchanges sales.
- 19. Carbon credit standard selection.
- 20. Carbon markets development and low-carbon economy.

Tentative list of assessment tools

N 0	Assessment tool	Assessment tool representation in the kit					
		Class work					
1	Survey/Quiz	ey/Quiz A tool of control, organised as a special conversation between a teacher and students on topics related to the course under study, and designed to clarify the amount of students' knowledge in a particular section, topic, problem, etc.					
2	Test	A system of standardised tasks that allows the teacher to automate the procedure for measuring the student's level of knowledge and skills	Tests bank				
3	Control work	A tool of control organised as a classroom lesson, at which students need to independently demonstrate the acquisition and mastering of the educational material of the course topic, section, or sections.	Questions on the course topics /modules				
4	Round table, discussion, polemic, dispute, debate, (class work)	Evaluation tools that allow the teacher to engage students in the process of discussing controversial issues, problems and assess their ability to argue their own point of view.	List of themes for round tables, discussions, polemics, disputes, debates.				
5	Business game and/or role play	Joint activities of a student group under the teacher's control to solve educational and professionally oriented tasks through the simulation of a real-world problem; this activity allows the teacher to assess the students' ability to analyse and solve typical professional challenges.	Topic (problem), concept, roles and expected results for each game				
6.	Presentation (defence) of project/report/ Library research paper /briefs *	A tool for monitoring the students' ability to present the work results to the audience.	Themes for projects/reports/ Library research paper/ briefs				
7	Pass/Fail assessment	A tool for checking the quality of students' performance of laboratory work, acquisition and mastering of the practice training and seminar educational material, successful completion of the advanced field internship and pre-graduate internship and fulfillment of all training assignments in the course of these internships in accordance with the approved programme.	Tasks examples				
8	Exam	The evaluation of the student's work during the semester (year, the entire period of study, etc.); it is designed to identify the level, soundness and systematic nature of theoretical and practical knowledge gained by the student, formation of independent work skills, development of creative	Examples of tasks/questions/exam question cards				

		thinking, ability to synthesise the acquired			
0	Casa	knowledge and apply it to solve practice tasks.			
9	Case	A problem-solving task in which the student is	Assignments to solve		
		asked to comprehend the real work-related	the case		
		(occupational) situation necessary to solve the			
		problem.			
10	Multi-level tasks	The tasks and assignments differ in terms of the	Set of multi-level tasks

Department of Environmental Safety and Product Quality Management

Set of assignments for control work

for the course Carbon Credits Markets

Carbon credit is ... credit in International Carbon Bank permits that allow the owner to emit a certain amount of carbon dioxide or other greenhouse

gases (GHGs)

the amount of GHG emissions of enterprise per year estimated CO₂ emissions at all stages of product life cycle

Clean Development Mechanism is ... a United Nations-run carbon offset scheme MENA carbon offset scheme EU carbon offset scheme Latin America carbon offset scheme

Which tool can be used to determine the GHG program's compliance with VCS Program principles and requirements and to assess whether the GHG emission reductions or removals issued under the GHG Program are fully compatible with VCUs?

GIS analysis Life cycle assessment Gap analysis Investment analysis

Assessment criteria:

(in compliance with the legal regulations in force)

Department of Environmental Safety and Product Quality Management

Business game

for the course Carbon Credits Markets

1 Theme (problem): Carbon markets development: pros and cons

2 Game conception: the establishment of benefits and disadvantages in regards to global and local carbon markets development for different stockholders

3 Roles:

- government;
- society
- non-profit organizations;
- entreasures
- bank organizations etc.

4 Expected outcomes:

- Business game helps students to obtain deep understanding of:
- the main approaches to global and local carbon markets development;
- the basic principles and tools of carbon markets functioning;
- the limits for global carbon market establishment.

Assessment criteria:

(in compliance with the legal regulations in force)

Department of Environmental Safety and Product Quality Management

Team-based or individual creative assignments/projects

for the course Carbon Credits Markets

As part of climate combat actions, understanding the products' footprint from their structure to get as accurate as possible view has become increasingly important.

A product's carbon footprint refers to the total amount of GHG emissions generated throughout its life cycle, from raw material extraction to disposal. In this context, the development of carbon footprint estimation helping companies make informed decisions regarding sustainable methods of production.

The purpose of the project is to calculate the carbon footprint of selected enterprise using software Open LCA.

Algorithm

1. Select the enterprise.

- 2. Establish the scope, boundary of production system, functional unit and cut-off rules.
- 3. Perform the inventory analysis (input and output fluxes of substances).
- 4. Define as impact category climate change potencial.
- 5. Make the data classification.
- 6. Calculate the values of indicators of categories (data characterization).
- 7. Make the data normalization.
- 8. Perform the assessment of significance, grouping, weighing.
- 9. Interpretate the data in the assessment of the life cycle of products. Analyze the carbon footprint of the product.

Task defense form – Power Point presentation of the report.

Assessment criteria:

(in compliance with the legal regulations in force)
