## 1. Methodological Guidelines for preparation for classes in the course «FLT Methodologies in International Examination Format».

Active teaching methods that are used in teaching:

- educational group discussions,

When conducting a discussion, it is necessary that participants clearly understand the subject, the general framework of the discussion, and the procedure to conducting it. When organizing a discussion, the teacher can create a favourable, psychologically comfortable environment. Place participants in a circle. In addition, it is important to clarify the topic or issue in advance. The introductory part is designed to update the participants' knowledge, introduce the necessary information, and provoke interest in the problem.

There are several ways to organize the introductory part of the discussion:

1. A brief preliminary discussion in small groups;
2. introduction of the topic of conversation through a pre-set task for one or two participants to make an introductory problem message that reveals the problem statement;
3. The use of a brief preliminary survey on the topic.

Any of the options should not take much time, so that you can quickly move on to the discussion.

A number of sequential steps must be taken to effectively conduct the discussion:

1. Assign roles and functions in the discussion group (moderator (organizer), analyst, logger, observer).
2. Determine the order of work when discussing the problem in discussion groups (setting the problem; dividing participants into groups, assigning roles in small groups, explaining to the manager what the expected participation of participants in the discussion is; discussing problems in small groups; presenting the results of the discussion to the entire team; continuing the discussion and evaluating the results).

- training (business and role-playing) games,

Among the active forms of student education, a special place belongs to the game (educational, business, didactic), which most adequately reflects the socio-psychological characteristics of young people as an object and subject of training and education.

Educational games help to form such important key qualifications of specialists as communication skills, tolerance, ability to work in a team, and independent thinking. Educational games are based on the principle of simulating different situations of cognition and communication. Individual

fragments of the game can be used directly in the classroom: role-playing, for example, when the

student is offered the role of a "polemicist" who asks difficult questions to the speaker, or when the

most prepared student is assigned to discuss one of the issues submitted for practical training.

A business game requires following certain sequential steps:

The first is to bring the task to the participants. Each participant must have a printed text of the problem (as for the game conditions, you should agree in advance whether they are accepted the same as in real life when solving similar problems, or whether any game changes are made).

The second is creating teams. Teams are formed in any way, and they have the right to assign themselves any names or numbers.

The third is the direct work of teams.

Then each team prepares a short (up to 10 minutes) oral report on their approaches and methods of

solving the problem and on the solution itself. The report is made in any form. Choosing the report

form is also a game result.

After listening to the reports, it is necessary to evaluate them, compare them, and sum up the results. This is an important part of the learning process.

When using the role-playing method, organizers should follow guidelines:

1. You need to carefully plan a role-play, having literature for developing roles or dossiers of materials for the main roles. It is recommended to have at least two audiences for groups to work in, since role development is a creative process.

2. The effectiveness of role-playing games is determined by the novelty of the experience, so if they are used at every opportunity, the value of this interactive technology decreases.

3. The number of working groups should be small (up to 10 people). This number allows you to create an informal creative environment that promotes productive learning.

4. It is recommended to involve assistants in the role-play. They can be other teachers or graduate students conducting research on the topic of the game.

5. If possible, make a video recording that will provide feedback and confirm certain provisions.

Training is a method of active learning aimed at developing knowledge, skills, and personal qualities. It is an intensive short-term (2 hours) form of training in a group (10-12 people), aimed at mastering the theoretical material, its consolidation, the formation of professional skills.

\* The training toolkit for self- studies to master the course is placed on the course page in the university telecommunication training and information system under the set procedure.

## **8. ASSESSMENT TOOLKIT AND GRADING SYSTEM\* FOR EVALUATION OF STUDENTS' COMPETENCES LEVEL UPON COURSE COMPLETION**

The assessment toolkit and the grading system\* to evaluate the competences formation level (competences in part) upon the course study completion are specified in the Appendix to the course syllabus. <https://esystem.rudn.ru/course/view.php?id=2225> .

\*The assessment toolkit and the grading system are formed on the basis of the requirements of the relevant local normative act of RUDN University (regulations / order)
