**Federal State Autonomous Educational Institution of Higher Education
"Peoples' Friendship University of Russia named after Patrice Lumumba"**

Academy of Engineering

(name of the main educational unit (MEU) that developed the educational program of higher education)

WORKING PROGRAM OF THE DISCIPLINE

ARTIFICIAL NEURAL NETWORKS (REINFORCEMENT LEARNING)

(name of discipline/module)

Recommended for the field of study/specialty:

27.04.04 CONTROL IN TECHNICAL SYSTEMS

(code and name of the training area/specialty)

The discipline is mastered within the framework of the implementation of the main professional educational program of higher education (EP HE):

**AIML and Space Sciences / Artificial Intelligence, Machine Learning and Space
Sciences**

(name (profile/specialization) of the educational institution of higher education)

1. THE GOAL OF MASTERING THE DISCIPLINE

The discipline "Artificial Neural Networks (Reinforcement Learning)" is part of the master's program "Artificial Intelligence, Machine Learning and Space Sciences" in the direction 27.04.04 "Control in Technical Systems" and is studied in the 3rd semester of the 2nd year. The discipline is implemented by the Department of Mechanics and Control Processes. The discipline consists of 4 sections and 10 topics and is aimed at studying the methods of constructing automatic control systems based on artificial neural networks, mastering the methods of solving basic control problems using neural networks, neural network architectures

The purpose of mastering the discipline is to teach students methods of constructing artificial neural networks.

2. REQUIREMENTS TO THE RESULTS OF MASTERING THE DISCIPLINE

Mastering the discipline "Artificial Neural Networks (Reinforcement Learning)" is aimed at developing the following competencies (parts of competencies) in students:

Table 2.1. List of competencies developed in students while mastering the discipline (results of mastering the discipline)

Cipher	Competence	Indicators of Competence Achievement (within the framework of this discipline)
UC-1	Capable of carrying out a critical analysis of problematic situations based on a systems approach and developing an action strategy	UC-1.1 Analyzes the task, identifying its basic components; UC-1.2 Defines and ranks the information required to solve the given problem; UC-1.3 Searches for information to solve the assigned task using various types of requests;
UC-7	Able to search for the necessary sources of information and data, perceive, analyze, remember and transmit information using digital means, as well as using algorithms when working with data obtained from various sources in order to effectively use the information received to solve problems; evaluate information, its reliability, build logical conclusions based on incoming information and data	UC-7.1 Searches for the necessary sources of information and data, perceives, analyzes, remembers and transmits information using digital means, as well as using algorithms when working with data obtained from various sources in order to effectively use the information obtained to solve problems; UC-7.2 Conducts an assessment of information, its reliability, builds logical conclusions based on incoming information and data; UC-7.3 Has mastered modern digital technologies, methods of searching, processing, analyzing, storing and presenting information (in the field of management in technical systems) in the context of the digital economy and modern corporate information culture.;
PC-1	Able to formulate goals and objectives of scientific research in the field of aerospace systems management, select methods and means for solving professional problems	PC-1.1 Knows the methods and means of solving scientific research problems in the field of artificial intelligence systems and robotic systems; PC-1.2 Able to formulate the goals and objectives of scientific research in the professional field; PC-1.3 Proficient in techniques for formulating the goals and objectives of scientific research, and knows how to select methods and means for solving problems of professional activity.;
PC-4	Capable of participating in scientific research and development of design solutions in the field of ballistics, dynamics and flight control of spacecraft	PC-4.1 Familiar with the basic methods and approaches used to solve problems in the field of artificial intelligence and robotic systems; PC-4.2 Has knowledge of methods for solving professional problems in the field of artificial intelligence and robotic systems; PC-4.3 Able to apply mathematical methods and modern information technologies when conducting scientific research.;

3. PLACE OF THE DISCIPLINE IN THE STRUCTURE OF THE EDUCATIONAL EDUCATION

Discipline "Artificial Neural Networks (Reinforcement Learning)" refers to the part formed by the participants of educational relations of block 1 "Disciplines (modules)" of the educational program of higher education.

As part of the higher education program, students also master other disciplines and/or practices that contribute to the achievement of the planned results of mastering the discipline "Artificial Neural Networks (Reinforcement Learning)".

Table 3.1. List of components of the educational program of higher education that contribute to the achievement of the planned results of mastering the discipline

Cipher	Name of competence	Previous courses/modules, practices*	Subsequent disciplines/modules, practices*
UC-7	Able to search for the necessary sources of information and data, perceive, analyze, remember and transmit information using digital means, as well as using algorithms when working with data obtained from various sources in order to effectively use the information received to solve problems; evaluate information, its reliability, build logical conclusions based on incoming information and data	Research work / Scientific research work; History and Methodology of Science; Information Technology in Mathematical Modeling; Information Databases;	Undergraduate Training;
UC-1	Capable of carrying out a critical analysis of problematic situations based on a systems approach and developing an action strategy	Research work / Scientific research work; History and Methodology of Science; <i>Artificial Neural Networks (Deep Learning)**</i> ; <i>Artificial Neural Networks (Deep Learning)**</i> ;	Undergraduate Training;
PC-1	Able to formulate goals and objectives of scientific research in the field of aerospace systems management, select methods and means for solving professional problems	Research work / Scientific research work; <i>Artificial Neural Networks (Deep Learning)**</i> ; <i>Artificial Neural Networks (Deep Learning)**</i> ; Advanced Methods of Space Flight Mechanics;	Undergraduate Training;
PC-4	Capable of participating in scientific research and development of design solutions in the field of ballistics, dynamics and flight control of spacecraft	Research work / Scientific research work; History and Methodology of Science; Advanced Methods of Earth Remote Sensing;	Undergraduate Training;

* - filled in in accordance with the competency matrix and the SUP EP HE

** - elective disciplines/practices

4. SCOPE OF THE DISCIPLINE AND TYPES OF STUDY WORK

The total workload of the discipline "Artificial Neural Networks (Reinforcement Learning)" is "5" credit units.

Table 4.1. Types of educational work by periods of mastering the educational program of higher education for full-time education.

Type of academic work	TOTAL,ac.h.		Semester(s)
			3
<i>Contact work, academic hours</i>	72		72
Lectures (LC)	36		36
Laboratory work (LW)	36		36
Practical/seminar classes (SC)	0		0
<i>Independent work of students, academic hours</i>	72		72
<i>Control (exam/test with assessment), academic hours</i>	36		36
General complexity of the discipline	ac.h.	180	180
	credit.ed.	5	5

5. CONTENT OF THE DISCIPLINE

Table 5.1. Contents of the discipline (module) by types of academic work

Section number	Name of the discipline section	Section Contents (Topics)		Type of academic work*
Section 1	Introduction to Reinforcement Learning.	1.1	Structure of the reinforcement learning algorithm.	LK, LW
		1.2	Agent. Policy function. Value function.	LK, LW
		1.3	Model. Types of reinforcement learning environments: deterministic, stochastic with complete and incomplete information, discrete and continuous, episodic and non-episodic, single-agent and multi-agent.	LK, LW
Section 2	Theoretical foundations and methods of reinforcement learning	2.1	Markov chains and Markov processes. Markov decision process.	LK, LW
		2.2	State value functions, Q-function. Bellman equation and optimality. Derivation of the Bellman equation.	LK, LW
		2.3	Dynamic programming. Monte Carlo methods and game theory.	LK, LW
		2.4	Learning based on temporal differences. TD forecasting. TD learning.	LK, LW
		2.5	Q training. SARSA algorithm. (State-Action-Reward-State-Action)	LK, LW
Section 3	Reinforcement learning software	3.1	Software packages for implementing neural networks. Tensor Flow	LK, LW
Section 4	Development of artificial neural networks. Symbolic regression methods	4.1	Genetic programming, Cartesian genetic programming, network operator method, variational methods of symbolic regression	LK, LW

* - filled in only for FULL-TIME education: LK – lectures; LW – laboratory work; SC– practical/seminar classes.

6. LOGISTIC AND TECHNICAL SUPPORT OF DISCIPLINE

Table 6.1. Material and technical support of the discipline

Audience type	Equipping the auditorium	Specialized educational/laboratory equipment, software and materials for mastering the discipline (if necessary)
Lecture	An auditorium for conducting lecture-type classes, equipped with a set of specialized furniture; a board (screen) and technical means for multimedia presentations.	
Computer class	A computer room for conducting classes, group and individual consultations, ongoing monitoring and midterm assessment, equipped with personal computers (in the amount of [Parameter] pcs.), a board (screen) and technical means for multimedia presentations.	
For independent work	A classroom for independent work of students (can be used for conducting seminars and consultations), equipped with a	

Audience type	Equipping the auditorium	Specialized educational/laboratory equipment, software and materials for mastering the discipline (if necessary)
	set of specialized furniture and computers with access to the Electronic Information System.	

* - the audience for independent work of students MUST be indicated!
